RE: ACC electric Co-ops

RECEIVED
AZ CORP COMM

DOCKET COMM

2015 APR 27 PM 2 56

Mr Anderson

Thank your for your email and your thoughts.

The Arizona Constitution is quite clear on the duties and responsibilities of the Arizona Corporation Commission. Not knowing if you have have the opportunity to review this section of the State Constitution, I have included this link:
<http://www.azleg.gov/Constitution.asp?Article=15>

After your review and if you wish, we could meet in SaddleBrooke, where I also live, to discuss further.

Thanks again

Regards,

Vince Leach, Representative
11th Legislative District
Arizona House of Representatives
1700 W. Washington ST., RM 342
Phoenix, AZ 85007
Office: (602)926-3106

Subject: ACC electric Co-ops

Dear Mr. Vince Leach, State Representative AZ District 11

Subject: "Solar proposal from small electric co-op moving through Corp Comm first" By Rachel Leingang April 13, 2015

Woody Woodbury sent me a copy of this document. It's first time I have seen a clear comprehensive explanation of what's going on behind the scenes at ACC regarding this subject. The proposed changes by Arizona's three major electric Co-ops, TEP, Trico, AEP is so diverse and proprietary to each it's impossible to imagine anything like this is even being considered. I'm not aware any distribution of this information has ever been made to the general public at large through local news papers or any other general public media.

Arizona is not alone in this conundrum. Our country's electric grid is an integrated part of our population and states should not be allowed to separate from it through their own individual legislation. Likewise the whole commercial and residential solar industry is equally involved. To break this down and allow individual state legislation is to invite future disaster within an electric grid that cannot be compared to any in the world.

This subject is far too complex to be decided by five ACC commissioners who feel their final opinion is more important than good of the entire country. This will become increasingly more complex as government mandated coal fired power generators are permanently shut down over next couple decades.

I suggest current Arizona Co-op electric rate structure remains intact while an outside unbiased professional study is made and a proposal submitted to bridge the true gap Trico Trico claims is "the fixed cost associated with solar users is more than \$1 million..." There is far more to it than this simple opinion alone that must be thoroughly investigated by professional unbiased engineering and financial resources, resolved, accepted and remain a temporary solution equally, mutually accepted and shared by all Arizona electric power co-op's. This must be and can only be accomplished through joint understanding and resolve between AZ public, AZ state legislators and Arizona Corporate Commission.

Respectfully, Bruce Anderson, SaddleBrooke, AZ
